PROFESSIONAL SUMMARY

Engineering professional with strong background in aeronautical applications, prepared to drive impactful projects. Consistently contributed to advancements in aircraft performance and safety. Reliable team player with focus on innovative solutions and adaptability to changing requirements.

Developed critical thinking and problem-solving skills in technically demanding environment. Demonstrated ability to manage complex projects and collaborate effectively with cross-functional teams. Looking to transition into aircraft maintenance field to apply analytical and technical expertise.

SKILLS

- | | |
|--|---------------------------------------|
| • Manufacturing and Fabrication | • CAD |
| • Structural Analysis and CFD simulations | • Technical Writing and documentation |
| • Leadership | • Python language programming |
| • CubeSat and Space System Design and architecture | • Project Management |
| • E-learning development | • Training delivery |
| • Organizational development | • Performance assessment |

WORK HISTORY

01/2025 to Current

Learning Officer

CubeKraft – Nairobi, Kenya

- I am a co-founder for the student led space technology startup focused on providing education of CubeSat (satellite) systems for research and training applications.
- Led the development and training division in designing hands-on learning programs to build capacity in the Space Sector.
- Involved in the development of a standard curriculum and facilitating technical workshops.
- Developed documentation used to facilitate training for new cohorts from The Technical University of Kenya and Kenyatta University, improving knowledge transfer and technical skill acquisition across the organization.

07/2025 to 12/2025

Airframe Engineer Intern

Nakuja Project – Kiambu, Kenya

- Contributed to the design, research and fabrication of solid-propelled rockets.
- Assisted in the structural design and analysis of rocket air frames, optimizing body tube geometry and material selection for improved performance.
- Worked on the fabrication and assembly of rocket body tubes applying composite layup techniques and machining.
- Supported the design and construction of the launchpad including structural layout planning, welding, assembly and mechanical testing.
- Prepared technical documentation CAD models (SolidWorks), and test reports summarizing design iterations, fabrication steps, and testing outcomes.
- Engaged in Multidisciplinary teamwork contributing ideas in improving the design, ease of manufacturing and reliability of the N-4 rocket system.

EDUCATION

11/2025

B.Eng.: Aeronautical Engineering

The Technical University of Kenya - Nairobi, Nairobi Province, Kenya

- Relevant courses: Aircraft Design, Propulsion Systems, Flight Mechanics, Control Systems, Space Systems Engineering, Aviation legislation, Computer Aided Design (CAD).
- Final year project: Development of a Low Earth Orbit Responsive Satellite based Flight Data Recorder
- Graduated with a Second-class honors (upper- division)

11/2019

High School

Maai Mahiu Boys' High School - Naivasha, Nakuru District, Kenya

GPA: A- (79 points)

PROJECTS

- Development of a Novel Space Equity Index Framework for Measuring and Promoting Equitable Access to Space Resources and Opportunities. The Space equity index in this context is defined as the fair and inclusive participation of all countries, regardless of economic status, in accessing, benefiting from, and contributing to space exploration, technologies, and governance. The paper is set to be published by early January.
- Development of A Low Earth Orbit Responsive Satellite-Based Flight Data Recorder. It involved developing an FDR backup system that shall be able to receive data, store, and relay to the ground stations therefore improving aviation safety. The paper is set to be published by early January.
- Led a student team that represented The Technical University of Kenya in developing of a model cube-satellite, "FloodSat" used as an early warning system in the event of floods in Kenya. The project was facilitated by the Kenya Space Agency in conjunction with the Italian Space Agency at the Luigi Broglio Space center in Malindi.
- Integration and intuitive representation of real-time weather data to the aircraft onboard system. The project was aimed at improving the current state of weather radars by creating an alert system in aircrafts such as the Beechcraft Bonanza and Piper PA-28 Cherokee.

- The use of Quantum Computing for Space Traffic Management. This study introduces a hierarchical quantum-classical framework that models collision avoidance as two Quadratic Unconstrained Binary Optimization (QUBO) problems. Using a synthetic constellation of 1000 LEO satellites, potential collision pairs were identified. The paper is set to be published by early January.

COURSES AND TRAININGS

- Ansys Associate Certificate: Foundations in Stress Analysis Jan 2025 – Aug 2025
- CubeSat Training, Luigi Broglio Malindi Space Center Oct 2024 – Nov, 2025
- Understanding Space by Teaching Science & Technology, Inc. Aug 2024 – Sep 2025

REFEREES
